Kids & Teens

Why Choose Astris PME?

As market leaders in Assistive Technology (AT) equipment in Australia, Astris PME provides high quality products that promote independent, active lifestyles. We have a passion for what we do and pride ourselves on delivering expert knowledge of innovative, specialised AT products.

In 2022, Astris PME celebrated 70 years of service to people with a disability! Since our inception in 1952, we have improved the lives of thousands of people by prescribing and supplying exceptional AT equipment from leading manufacturers around the world. Our personalised, expert advice and products are chosen to meet individual needs of clients and change their lives for the better.

The Astris PME Product Range

The Astris PME team continually research new products and global innovation, which is why we can provide the very best assistive technology equipment available in the Australian market today. Before any products are added to the Astris PME range, they are tested and trialled by our panel of equipment users, therapists and product consultants, to make sure they meet all functional and quality requirements, plus regulatory standards for safety.

We are pleased to showcase this dynamic range of quality specialised assistive technology products with you. This brochure features products that have been chosen to indicate the diverse range of products we have available. Most of these products are scripted/prescribed, which means they are customised to suit the specific needs of individual clients.

Product Information, Demonstrations & Trials

Further details, including photos, videos and specifications, can be found by visiting our website and entering the product name in the search field www.astris-pme.com.au.

Clients: To arrange a trial of any of our range, please contact your preferred therapist, and request a joint consultation with an Astris PME Product Consultant. These can be held at our clinic rooms, at your therapist's clinic, or at another suitable location of your choice.

Therapists: To arrange a trial of any of our range, please contact your local branch or our national support hotline.

After Sales Care

An important factor when choosing your AT provider is to consider how well they support you with any after sales care you need. Astris PME has you covered. Depending on your situation, location and level of complexity of your equipment we can provide a range of range of after sales care and support.

We also have mobile workshops that can come to your home, school, hospital, or clinic, and provide on-site repairs, maintenance, and adjustments.

For your peace-of-mind we also offer Programmed Maintenance Plans to many locations. This will help safeguard and extend the life of your equipment, so small issues can be resolved before they cause major issues, and in many cases programmed maintenance can avoid these small issues from even arising.

Scan the QR code or call our Service Department on 02-9135-6440 to learn more about our Programmed Maintenance Plan.

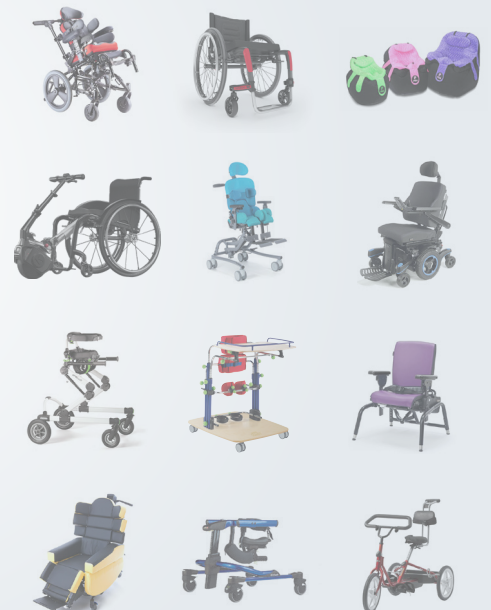

Hire Options For AT Equipment

Hire is a great option for short term needs, or where an NDIS Participant is waiting for approved funding. Hire is also beneficial when needs change.

Our Hire service provides you with choice and flexibility when it comes to your care. It can help support you through the times of need as well as let you trial different solutions for your care.

Scan the QR code or call our Hire Department on 02-6380-1001 to learn more about AT Equipment Hire.

8 Tips On Selecting The Right PWC For You

Choosing a Power Wheelchair (PWC) can be an exciting process, one that means independent mobility for possibly the first time. Imagine being able to keep up with your friends and family!

However, given the high costs of powered mobility options and the expectation that it will meet your needs for a few years, it is really important to get it right.

The experienced team at Astris PME have been working with families and therapists for many years and have put together a list of 8 essential tips to help you make the right choice:

1

Seek expert advice from your therapist and an Assistive Technology Professional (ATP). Trial the equipment before making a decision.

2

Consider your environment, ensuring the PWC functions well at school, home, and various activities while remaining compact enough for easy access.

3

Consider your clinical needs by working closely with your therapist to ensure the equipment accommodates both current and future requirements. If uncertain about future needs, consider a hire option temporarily.

4

Align your PWC choice with your goals, including school, family, and personal activities.

5

Consider your seating system, ensuring comfort, support, and adaptability as you grow.

6

Evaluate post-sale support, including warranty, programmed maintenance packages, and after-sale support (including breakdowns) to keep your PWC in optimal condition. This is extremely important for you and your family so you can stay mobile.

7

Consider a Manual Wheelchair (MWC) with Power Add-On. Before you jump in and purchase a PWC, consider if a manual chair with a removable power assist or power-add on would better suit your needs. It is recommended families also discuss this option with your therapist and ATP.

8

Finally, choose a colour you love!

Power Assist - Helping You Make The Choice

Sometimes it would make each day at school, home and everywhere in between a little easier if your manual wheelchair could have a power boost. This is possible in the form of a power assist device added to your existing or new fixed or folding frame wheelchair - and it can make all the difference for you and your family.

At Astris PME, we enjoy improving lives by providing a broad range of power assist options for you and your family to choose from. Understanding the unique needs of you and your family will assist in deciding on the most suitable options to explore further. Some factors to consider are:

- Your needs and physical capacity.
- Your family dynamics and needs.
- Environments you would like to access.
- Activities you typically participate in.
- What help you have available to physically manage a power assist device.

Managing a power assist option independently on your wheelchair also requires skills relating to memory, perceptual abilities and cognitive skills. Goals for providing a device can be diverse and may include independent or assisted use of power assist. Having a discussion with your prescribing Therapist about whether a power assist option would be suitable is the best place to start. They're also great at guiding you through the process of trialling appropriate options.

There are numerous benefits to using power assist devices, including:

- Reducing stress and strain on the upper limbs – shoulders and wrists – for both you and your family.
- Making participation and access easier every day.
- Permitting access to challenging environments.
- Enabling storage into a standard car boot without the need for the family to invest in the purchase of larger vehicles and additional costs associated with vehicle modifications.
- Reducing the need for home modifications to accommodate larger power chairs.

Make an appointment with one of our Specialist Consultants to find out which power assist option is right for you and your family.
