Positioning System

	STABILObed	CareWave	Poz'In'Form	Sleepform	Simple Stuff Works	Jenx Dreama
Description	STABILObed® is a modular system used for precise and effective positioning of the user in various lying positions.	A body positioning system consisting of various shaped supports in adult and paediatric sizes for mild to moderate needs.	Positioning components with microfibre cushion filling in a micropore zip removable cover offers postural support and comfort during sleep.	A mouldable sleeping system well suited to those with asymmetry.	A soft, comfortable base with non-slip properties to secure positioning components at preferred locations to provide a stable, comfort, safe sleep positions for those with moderate to complex needs.	A mattress replacement system on an aluminium base which easily fits onto any single bed base.
Support	The cover is made of patient friendly and easy to disinfect PureMed™ and AntySlip™ material, used to prevent the cushion from moving once positioned. Microbead filling with the unique feature of adding/removing microbeads to optimise resistance and comfort during positioning. The unique shapes offer support for atypical positioning scenarios.	The micro particle beads contour to support the body. These can be adjusted closer to the body for increased support. Support coverings are waterproof and breathable Polyamid bi-elastic fabric (47%) coated with polyurethane (53%) and coated with antibacterial treatment.	Offers comfortable positioning with the firmness qualities of the microfibre foam. The lenzing cover should be used with any cushions used around the head.	The mouldable base contours to the user and can be remodelled to accommodate change. Options such as chest strap and hip guides are also available.	Microfibre filling in variable shapes and sizes. Highly suit for temperature regulation while optimising comfort for postural stabilisation for varying conditions. The positioning components are easily inserted and removed when getting into and out of bed.	The horizontal layered foam components make up the comfortable, breathable mattress. Variable supports can be configured for the most complex postures and tonal patterns.
